

RITRANSPARENCY REPORT 2020

New Forests Pty Limited

About this report

The PRI Reporting Framework is a key step in the journey towards building a common language and industry standard for reporting responsible investment (RI) activities. This RI Transparency Report is one of the key outputs of this Framework. Its primary objective is to enable signatory transparency on RI activities and facilitate dialogue between investors and their clients, beneficiaries and other stakeholders. A copy of this report will be publicly disclosed for all reporting signatories on the PRI website, ensuring accountability of the PRI Initiative and its signatories.

This report is an export of the individual Signatory organisation's response to the PRI during the reporting period specified above. It includes their responses to mandatory indicators, as well as responses to voluntary indicators the signatory has agreed to make public. The information is presented exactly as it was reported. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory to select are presented in this report. Presenting the information exactly as reported is a result of signatory feedback which suggested the PRI not summarise the information.

PRI disclaimer

This document presents information reported directly by signatories. This information has not been audited by the PRI Secretariat or any other party acting on their behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented, and no responsibility or liability can be accepted for any error or omission.

Usage restrictions

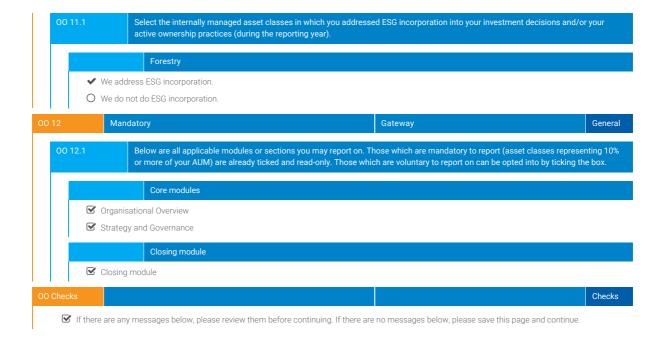

Public Transparency Reports are the intellectual property of PRI. Under no circumstances, can this report or any of its contents be sold to third parties.

✓ Yes			

Describe the identified transition and physical climate-related risks and opportunities and how they have been factored into the investment strategies/products.

New Forests' business strategy anticipates net positive opportunities for the forest sector from the transition to a low-carbon economy, including climate regulation and demand for sustainable materials, as part of a global response to climate change. New Forests stays aware of developing climate science and policy that inform our business. In particular, we note that the IPCC Special Report: Global Warrning of 1.5 Degrees indicates significant changes are required in the forest sector to contribute to viable mitigation pathways. This will require a shift from the forest sector being a net emitter to a net source of carbon dioxide removals through sustainable forestry management and reforestation. However, despite that the forest industry, combined with agriculture, currently contributes around 24% of global GHG emissions coming from land use, only around 3% of climate finance goes to forestry and land use.

In seeking to contribute to forest-climate solutions and the growth of a rising sustainable bioeconomy, New Forests is positioned to benefit from positive feedback cycles linked to emerging climate trends and forestry investment:

- 1. Rising timber demand for traditional and new wood products as low-carbon inputs for the circular and low-carbon economy reinforces positive pricing trends and market diversification for wood fibre.
- 2. Increasing demand for low-carbon investments and for carbon dioxide removals from forestry provides capital flows for the expansion of the forest sector, including plantation establishment, sustainable intensification, and diversification of processing and manufacturing for low-carbon products.
- 3. Product innovation and investment in Natural Climate Solutions creates new low-carbon investment opportunities, creating a positive cycle of investment and return comprised both of financial returns and beneficial climate outcomes.
- 4 Carbon markets and offsets

New Forests also recognises that there are real and rising physical risks of climate change to the world's forests. These risks include exposure to changing pests and disease, as well as negative effects from changing weather patterns and extreme weather events, including drought, flood, extreme storms (erosion, windthrow), and wildfire. Forest management to mitigate these risks may call for adaptation and changed silvicultural practices, as well as financial measures such as insurance to minimize financial losses. A full description of New Forests' assessment of physical and transition risks to our business and how they factor into our investment strategies and products is available in New Forests' Climate Disclosure Report, available on our website. This report was designed to be aligned to the TCFD.

O No

SG 01 7 CC

Indicate whether the organisation has assessed the likelihood and impact of these climate risks?

Describe the associated timescales linked to these risks and opportunities.

The world's forests face real and rising physical risks of climate change, as well as specific opportunities arising from climate finance and the need to invest in mitigation, adaptation, and resilience. New Forests assessed the most material short-, medium-, and long-term transition and physical risks as related to our investments in the forest sector. Our assessment of time scale considers issues affecting near-term management of assets and our ability to invest capital, to add value to investments during a typical closed-end fund holding period, and to address the long-term planning extending through the higher end of the range of forest management cycles in the types of forests we manage (with tree rotations across our portfolio varying from as little as eight years in the tropics to more than 80 years in semi-natural managed forests of the US). Additional information can be found in New Forests' TCFD Climate Disclosure Report (March 2020).

O No

SG 01.8

Indicate whether the organisation publicly supports the TCFD?

O No

SG 01.9 CO

Indicate whether there is an organisation-wide strategy in place to identify and manage material climate-related risks and opportunities.

Describe

Board and management role in oversight and assessing climate-related risks and opportunities

New Forests' Board and Executive Committee recognise that forestry investment solutions will be critical to addressing the climate crisis. Climate change-related risks and opportunities are reviewed by the Board through the business planning and strategy review process. New Forests' Executive Committee is responsible for implementation and monitoring of the business plan and strategy development on an ongoing basis.

Identifying and managing climate-related risks and opportunities

As an investment manager, the principle climate-related risks and opportunities arise in the asset management function for the capital we deploy and the investments we manage for our clients. Climate-related opportunities are considered in strategic asset planning, which typically follows an annual cycle for review, budgeting, and execution. These are principally driven by wood fibre and carbon market opportunities but may also include additional climate positive activities like increasing biological growth, supply chain efficiency, operating efficiency, and engaging in environmental restoration and conservation projects that promote ecosystem resilience.

Climate considerations feature throughout New Forests' policies and procedures that support asset management. New Forests' Social and Environmental Management System (SEMS) requires the identification of significant environmental risks and that operational management controls be in place to manage significant risks. Operational controls include applying responsible forest management practices to achieve high-quality, third-party forest management certification for all production forestry investments. Additionally, New Forests' Sustainable Landscape Investment (SLI) framework is the company's environmental, social, and governance (ESG) and impact management tool, which includes an integrated view of land use planning, ecosystem services, productivity, shared prosperity, risk management and governance. The SLI framework has climate impact reporting, as well as metrics on factors that can support climate positive asset management.

Climate change-related risks are integrated into New Forests' enterprise risk management (ERM) framework, such that significant policy, market, and environmental risks related to climate change are monitored and discussed. The ERM is guided by the risk appetite statement endorsed by New Forests' Board of Directors and includes regular review of risks at the New Forests corporate level, as informed and supported by fund-level and asset-level risk assessment and management. Each risk is assigned a risk rating and tolerance, with stated mitigations and residual risk ratings determined. The ERM includes a workbook-based risk assessment tool that is applied as part of due diligence and investment appraisal, as well as a dedicated component focused on key risk parameters that span transition and physical risks. The assessment results are documented and considered in investment decisions. During asset management, the ERM requires that asset risk registers be developed and regularly maintained as

	Additional information [Optional]. re detailed asset class and sector-based guidelines are included within New Forest's Social and Environmental Management System (SEMS). Screening
	exclusions are included within fund policies, where relevant, to support compliance with the investment exclusions of LPAs and Management
	eements.
	SEMS and Sustainable Landscape Investment framework are proprietary systems that enable our proactive management of social and environmental use associated with our investment activities. As such, we believe they are an important competitive advantage. Clients and other interested stakeholders
n	request a copy of the SEMS and related documentation.
	Mandatory Core Assessed General
	Indicate if your organisation has a policy on managing potential conflicts of interest in the investment process.
	Yes
	SG 03.2 Describe your policy on managing potential conflicts of interest in the investment process.
ı	New Forests' Managing Conflicts of Interest (COI) policy supports identification and management of COIs that may arise. Identifying actual, potential, and perceived COIs is the responsibility of all New Forests' board members, committee members, and employees, and in particular, each
	individual is responsible for:
	Being aware of and complying with the obligations of the policy. Compute displacing all paragraph interests regardless of materiality in accordance with the policy.
	 Formally disclosing all personal interests, regardless of materiality, in accordance with the policy. Assessing whether personal and business interests conflict or have the potential to conflict with their duties.
	 Avoiding a COI, where possible. Providing a quarterly compliance attestation that they have reported all COI's that they are aware of, and that they have complied with the
	requirements of the COI Policy.
	To ensure COIs are managed, New Forests' approach is to implement an appropriate response in each instance by either controlling, disclosing, or avoiding actual, perceived, or potential COIs, where appropriate. In addition, New Forests maintains a COI Register that includes all COIs identified,

and the steps taken to manage each COI such that the quality of New Forests' decision-making is not compromised as a result of managing the conflict.

SG 07.6 CC	For board-level roles that have climate-related issue oversight/accountability or implementation responsibilities, indicate how these responsibilities are executed.
	ard supported the company to undertake its Climate Risk & Strategy Work Plan, which includes alignment with the TCFD Recommendations. as and approves the Climate Disclosure Report and will have oversight for New Forests' Climate Neutrality Commitment, which comes into
System (SEMS),	nave oversight of sustainability initiatives and approve changes to guiding documents such as the Social & Environmental Management the Sustainable Landscape Indicators (SLI), and the Responsible Investment Policy. All of these systems have climate-related guidance, the identification and management of physical and transition risks.
SG 07.7 CC	For management-level roles that assess and manage climate-related issues, provide further information on the structure and processes involved.
Jointly, the Execu	itive Committee has oversight for integration of climate-related issues throughout the business, including in funds management as part of

Jointly, the Executive Committee has oversight for integration of climate-related issues throughout the business, including in funds management as part of fiduciary duty.

The Managing Directors of each New Forests region (Australia-New Zealand, Southeast Asia, and the United States) is responsible for ensuring compliance with New Forests' policies and fiduciary duty as an investment manager for their given geography. This includes managing climate-related risks and opportunities

Operations Directors are responsible for ensuring climate-risk management and opportunities are considered and managed for all assets for which they are responsible. Operations Directors work with their internal teams, third-party managers, and investees to ensure compliance with New Forests' ESG and RI policies, including for climate issues.

Investment Directors and Associate Directors have responsibility for integrating climate-related risk assessment in investment appraisals and incorporating appropriate climate-related risks and opportunities into investment documentation, including IC papers and recommendations.

The Head of Risk and Compliance has oversight for all climate-related risk management and is a co-lead of the Climate Risk & Strategy Work Plan for New Forests.

The Investor Services team, guided by the Director of Sustainability & Communications, ensures inclusion of climate-related issues in all relevant investor communication and documentation. The Director of Sustainability & Communications is a co-lead on the Climate Risk & Strategy Work Plan and is responsible for the Climate Disclosure Report.

SG 14.5

Additional information [Optional]

New Forests' vision is for forestry to become a leading sector in the transition to a sustainable future. The interconnectedness of the forest sector and climate change is central to this vision, with sustainable forestry and nature-based climate solutions (NCS) both essential in any climate mitigation pathway that can achieve the goals of the Paris Agreement. While this response focuses on climate, there is rising recognition of the need to understand the impact and risk of business on nature and biodiversity, as well as the risks and opportunities that businesses face relating to nature and biodiversity. Climate and biodiversity are both included in New Forests' vision, which drives our business planning and strategy, making climate change, climate impact, and other environmental and social impacts central considerations in our business.

New Forests' business strategy anticipates increasing risks from climate change, primary related to physical risks to forestry assets, but also believes there are positive opportunities for the forest sector in the global transition to a zero-carbon economy. Key trends affecting our business include climate regulation and demand for sustainable materials and sustainable investments. New Forests is positioned to benefit from positive feedback cycles linked to increased demand for low carbon investment, increased timber demand for low-carbon fibre and building materials, and product and investment innovation in NCS.

With an ongoing cycle of carbon sequestration and storage – both in the forest and in sustainable forest products – forestry investments align with a low-carbon economy, particularly with opportunities in the growing circular bioeconomy. Such investments may also benefit from carbon pricing if they can increase the amount of carbon stored in biomass over time. New Forests anticipates sustainable forestry investments will meet the emerging requirements for green finance and sustainable investment. For example, under the EU Sustainable Finance Taxonomy, forestry investments only qualify as sustainable if they include forest certification and GHG accounting. When considering the overall life cycle for timber and wood fibre products, it is also important to consider downstream emissions associated with transportation and timber processing. Innovation and operating efficiencies throughout the sector will continue to deliver emissions reductions throughout the supply chain while also contributing to the long-term storage of carbon in durable wood products.

New Forests' investment strategies have the potential to bring capital to forestry-based climate change mitigation, adaptation, and resilience solutions. New Forests' regional investment strategies promote climate action, such as:

- Our US Carbon Forestry strategy monetises carbon sequestration through the California emissions cap-and-trade market, combining carbon finance with timber harvest revenue, informed by proprietary analysis to target high carbon value properties.
- Our investment program in Southeast Asia includes a mandate to undertake additional climate mitigation activities, such as environmental restoration, reforestation, and avoided deforestation, as part of forestry investments that combine production and conservation.
- Our Australia and New Zealand investments participate in carbon markets via the New Zealand Emissions Trading Scheme and the Australian Carbon Climate Solutions Fund.

General

SG 14.6 CC	Provide further details on the key metric(s) used to assess climate-related risks and opportunities.

Metric Type	Coverage	Purpose	Metric Unit	Metric Methodology
Portfolio carbon footprint	All assets	To understand overall climate impact of funds and contribution to carbon removals	tCO2e	Proprietary carbon calculations, moving toward GHG Protocol
Exposure to carbon- related assets	Minority of assets	Minority is due to low-carbon nature of sustainable forestry		
Other emissions metrics	All assets	Carbon stock in biogenic carbon (forest carbon)	tCO2e	

SG 14<u>.8 CC</u>

Indicate whether climate-related risks are integrated into overall risk management and explain the risk management processes used for identifying, assessing and managing climate-related risks.

✔ Processes for climate-related risks are integrated into overall risk management

Please describe

Board and management role in oversight and assessing climate-related risks and opportunities

New Forests' Board and Executive Committee recognise that forestry investment solutions are critical to address the climate crisis. Relevant climate change-related risks and opportunities are reviewed by the Board through the business planning and strategy review process. New Forests' Executive Committee is responsible for implementation and monitoring of the business plan and strategy development on an ongoing basis.

Identifying and managing climate-related risks and opportunities

Climate change-related risks and opportunities are also integrated into the company's enterprise risk management (ERM) framework, such that significant policy, market, and physical risks related to climate change are monitored and discussed. The ERM is guided by the risk appetite statement endorsed by the New Forests Board of Directors and includes regular review of risks at the New Forests corporate level, which is informed and supported by fund-level and asset-level risk assessment and management. Each risk is assigned a risk rating and tolerance, with stated mitigations and residual risk ratings determined. New Forests' management of climate-related risks spans from financial risk mitigations such as insurance for tree crops, to ensuring local property management strategies include operational risk mitigation, through to stakeholder engagement in industry and policy forums, seeking to ensure forests are considered a vital part of the response to climate change.

New Forests is also active in investor groups on climate changes, including membership in CERES, IGCC, and AIGCC. Through engagement in the policy working groups of these investor organisations, New Forests aims to stay informed of policy changes and potential regulatory issues that may affect our investments. In addition, a member of New Forests' US investment team leads US public policy engagement on climate and forest policy, and the company is part of a multi-stakeholder coalition that promotes the role of forestry in climate mitigation from a policy perspective. This active engagement is an important risk mitigant, and moreover aims to enhance New Forests' ability to capture opportunities from supporting the transition to a low-carbon economy.

New Forests' Social and Environmental Management System (SEMS) is designed to systematically identify, manage, and monitor E&S issues associated with our investment activities. The SEMS establishes a framework for each New Forests investment product to determine how it will comply with our RI Policy via a SEMS Declaration Document, which includes requirements for risk categorisation, due diligence, asset management, recordkeeping, and reporting. An annual internal audit is conducted for each fund, which supports management review, client reporting, and annual sustainability reporting.

Forestry

The Certification and Standards Guidance of the SEMS sets a minimum standard for the use of third-party certification and standards across all of our funds. We seek to achieve forest management certification with the Forest Stewardship Council (FSC) for all eligible assets. The SEMS also includes standards guidance for the use of Environmental Management Systems, the IFC Performance Standards, and forest products chain of custody certifications. Thus, a main objective of the SEMS is achieving and maintaining the appropriate third-party certifications, which results in certified assets that can sell certified timber products.

SG 16.2 Additional information [Optional].

New Forests also uses our Sustainable Landscape Investment (SLI) framework, which entails a system of indicators and targets across six thematic drivers of ESG and investment performance. The SLI metrics are being used to assess E&S impact for the assets and identify areas of success and future improvement.

In addition to the processes described above, New Forests employs operational management staff who oversee and support third-party property managers and operating companies, working closely across a variety of ESG issues above and beyond certification requirements. ESG reporting and monitoring is integrated throughout every step of our asset management to ensure it is a continual focus and to enable us to work together with portfolio companies and property managers to manage ESG risk and capture value from ESG opportunities.

SG 18 Voluntary Descriptive General

SG 18.1

dicate whether any specific features of your approach to responsible investment are particularly innovative

GG 18.2 Describe any specific features of your approach to responsible investment that you believe are particularly innovative

New Forests is committed to accelerating investment in sustainable forestry – a necessary component of meeting the aims of the Paris Agreement and the Sustainable Development Goals. As our business grows, we are innovating in financial models and structure, building new coalitions, and pushing the boundaries on forestry investment management. We do this in relentless pursuit of our mission: to see forestry as a sector leading the transition to a sustainable future. Recent highlights include:

- Commencing a Climate Risk & Strategy Work Plan that has advanced two key initiatives: (1) TCFD alignment not only for our investment
 management business, but now embedding TCFD-aligned requirements for our forestry assets. For our business, we have released a Climate
 Disclosure Report that covers Governance, Strategy, Risk, and Metrics and Targets for New Forests. For the investments we manage, we are
 working with external advisors to ensure we integrate strong data and science in the development of a consistent approach to assessing
 climate-related issues, climate scenario analysis, and disclosure, using consistent metrics while working toward appropriate targets. (2)
 Establishing a Climate Neutrality Plan with ambitious targets. New Forests will be climate neutral in its operations from 2020 onward and will
 seek to generate net carbon removals through the investments we manage. This means overall, as our business and investment portfolio
 grow, we are consisting aligning our growth with progress toward global carbon removal targets necessary to halt and reverse the impacts of
 climate change.
- New Forests partnered with Generation Investment Management to initiate a new vision for Investing in Natural Climate Solutions. Through convening leading scientists, NGOs, and investors, we seek to create investor awareness of the opportunities for investing in NCS at scale. This work continues through 2020 as we work to release our shared investment vision and disseminate it throughout the investment industry, culminating with a high-level leadership summit on investing in NCS. This is a cross-asset-class initiative driven by investment managers and using a multi-stakeholder process to ensure investment strategies align with the science on NCS and that capital flows are unlocked toward this critical issue.
- Promoting blended finance as a tool to scale sustainable forestry investment in Southeast Asia a sector in an area overlooked by most institutional investors. New Forests worked with a US-based foundation, the David & Lucile Packard Foundation, to design and launch an innovative structure that combines two equity share classes with similar rights and terms, but seeking to combine ability for high-impact-oriented investors to catalyse additional impact management within the fund, leading to the creation of increased climate, biodiversity, and community benefits. In addition to creating these additional positive impact outcomes, the high levels of ESG and impact management lower risk for commercial investors, supporting access to sustainable themed and impact investments at commercially appropriate scale, terms, and with an improved combined impact-risk-return profile.
- Creating investment products that link climate mitigation at scale with core investment returns through our Carbon Forestry strategy. This
 approach demonstrates the concept of "impact alpha" where the driver of the impact is directly correlated to the financial return drivers.
 Through this strategy, New Forests monetizes the climate mitigation benefit of "improved forest management" using regulatory protocols for
 carbon offset projects, creating revenue through credits sales in the California carbon market, which delivers current income while still
 enabling the long-term sustainable forest management for timber production, preserving the traditional timberland investment return drivers
 from capital appreciation and biological growth.
- New Forests has developed a conceptual model called Sustainable Landscape Investment that encapsulates six themes that we believe drive
 sustainability performance in forestry investment. We would be pleased to discuss this model with the PRI or others who are interested. In
 2018 we launched an ESG and impact monitoring and reporting framework across the entirety of our portfolio. Through 2020 we anticipate
 continuing to implement this framework while deepening its linkages throughout the investment process and our asset management
 governance.
