MEDIA RELEASE

NEWFORESTS acquires forestry asset in the United States

Acquisition expands presence in Oregon's world-class forestry sector

United States: 25 November 2026 – NEWFORESTS, a global investment manager specializing in nature-based real assets and natural capital strategies, has completed the acquisition of 9,300 acres of forestry assets in Oregon, one of the world's leading forestry regions and the largest softwood producing state in the United States.

The property which is located in Josephine County, consists of Douglas-fir and a diverse forest landscape that provides habitat for species including the Northern Spotted Owl and Pacific marten.

Consistent with NEWFORESTS' approach to natural capital investing, the estate will be managed with the aim to deliver investment performance alongside positive climate and environmental outcomes.

In addition to developing a carbon project under California's Cap-and-Invest Program, NEWFORESTS will seek opportunities to enhance biodiversity, conservation values and ecosystem services across the asset.

Sam Rorabaugh, Global Head of Investments at NEWFORESTS, said, "We're delighted to make this acquisition in Oregon, a key forestry region which includes highly productive forests, mature processing infrastructure and access to both domestic and international markets. This is a quality asset that aligns strongly with our investment strategy and provides a compelling opportunity to create long-term value for our investors."

This acquisition further expands the company's growing presence in the US, which includes assets in Washington, Oregon, Northern California and Oklahoma.

It follows the firm's acquisition of a 44,000-acre forestry property on Washington's Olympic Peninsula in June 2026, and recently the launch of its Global Landscape Opportunities strategy, which is expected to have an allocation to assets in the United States.
